SCHEMATICS AS CODE

BRAND IDENTITY

V1.0 · 2026

01 — PRIMARY MARK

A single schematic wire path draws a **W** into an **L**. Solid terminals anchor the form; the open node at top-right marks a free signal pin — the one electronics cue. This is the canonical mark. Do not redraw it.

02 — CONSTRUCTION & CLEAR SPACE

Built on a 5-node baseline grid.
Stroke = $8u \cdot \text{node } \emptyset = 14u \cdot 1.6\times \text{ ratio}$.

Keep clear space $\geq x$ on all sides,
where x = one node diameter.

03 — COLOR

Ink

#16181D
Primary mark &
text

Paper

Accent node,
links, syntax

Graphite

#6F6C64
Secondary text,
captions

The mark is fundamentally monochrome. Signal cyan is an accent only — never recolor the whole wire path.

04 — LOCKUPS

05 — APPLICATION

avatar

app tile

npm / signal

```
WL $ wire build adder.wire → adder.svg
✓ parsed 14 nets · 9 components · wrote adder.svg (2.1 kb)
```

06 — DO NOT

Don't stretch or distort.

Don't recolor the wire or gradient it.

Don't rotate or skew.

Don't place ink on low contrast.
